For more information, call **702-242-7088** or email **ProviderAdvocateTe@uhc.com**.

Documentation requirements:

- Document the mammogram with at least the month and year performed
- The actual mammogram result is not required
- Always include a date of service when documenting a member-reported mammogram

The following do not close the gap:

- Breast ultrasound
- Breast MRI
- Breast biopsy

Members may be excluded if they have:

- History of bilateral mastectomy
- Absence of both breasts
- Left and right unilateral mastectomies
- Gender-affirming chest surgery with a diagnosis of gender dysphoria
- Hospice or palliative care during the measurement year
- Certain frailty and advanced illness criteria (age 66+)

Coding reminders

- For patients with a history of bilateral mastectomy, submit ICD-10 code Z90.13 when appropriate and documented in the medical record.
- Patient refusal does NOT remove the member from the measure. Providers should continue education and outreach efforts.
- Document patient-reported mammograms performed outside your practice in the medical record, including the month and year of service.
